

MANAGEMENT POLICY

CIC energigUNE is an excellence research centre focused on R&D and innovation activities in the field of materials and systems for energy storage. It is the RVCTI (Basque Science, Technology and Innovation Network) reference agent in the following areas of knowledge:

- **Electrochemical Energy Storage (EES)**
- **Thermal Energy Storage (TES)**

At CIC energigUNE we have an exceptional work environment with professionals and a first-class research team, who combine local and international talent and who have scientific infrastructures and equipment for the development of their activity that set us apart from our competitors. It is this combination, which in no case is arbitrary, that has allowed us to become an international benchmark.

This positioning would not have been possible without the support of institutions such as the Basque Government and the Araba Regional Council (DFA), and of course, our Board of Trustees, which has representation from the main companies in the sector.

Likewise, the support of our International Scientific Committees is crucial, and with their generosity, they help us to position ourselves in the most promising areas of energy storage.

In this regard, we understand that the collaborative strategies that facilitate this transfer are key, therefore CIC energigUNE will promote the necessary tools.

We regard management as the cornerstone in optimising the operation of the centre, in which the R&D and innovation activities play a central role as a generator of results in the form of excellent, disruptive and cutting-edge knowledge.

Through technology transfer and a close and constant relationship with the Basque industry and its needs, CIC energigUNE -in collaboration with other RVCTI players- intends for the knowledge resulting from the activity of the centre to become the answer to the needs of the Basque industry, thus promoting the generation of wealth and employment.

Meeting this core aim can only be done through our employees, since their talent is one of the main assets of our organisation.

The Management of the centre is fully aware of the need for a clear and firm commitment to its Management Model, constituting the essential pillar of the efficient operation of the centre. Therefore, it has made efforts to provide itself with a system based on process management with a philosophy of continuous improvement and commitment to comply with the applicable requirements based on standard UNE 166002.

As a guarantee of success of this commitment we will equip it with the resources that are necessary, and signing this policy is proof of my commitment.

Nuria Gisbert Trejo
General Manager
