COMPOSITION ANALYSIS

Compositional analysis methods are normally used and very useful to identify unknown material's composition, catch out a suspect element in the composition or compare different materials.

WHAT CAN WE DO?

- Chemical composition analysis (global, mapping, depth profiling).
- Identification and quantification of secondary phases, additives, dopants and impurities.
- Analysis available for materials in heterogeneous state: powder, colloids, gels, polymers, microcrystalline, amorphous, films/coatings, soft matter, liquids, organic and inorganic.

FOR WHO?

Food & agriculture

Aerospace

Automotive

Biological

Ceramics

Chemical

Petrochemical

Energy storage

Solar and photovoltaics

Mining & Metallurgy

Paint and pigment

Coating and adhesives

Pharmaceutical

Polymer and composites

Paper industry

Semiconductors & microelectronics

INDUSTRIES

WE OFFER

**TURNKEY
SOLUTION**
